Alexey

Python Backend Developer

Bălți, Moldova | Remote
github.com/Middlewarer

Python developer with 3 years of experience in B2B SaaS. Develop and maintain REST APIs, work with PostgreSQL, service integrations and background tasks. Main stack: Django and Django REST Framework. Contribute to testing and releases.

Technical skills

Backend: Python, Django, Django REST Framework, FastAPI, REST API, HTTP, JWT.
Data: PostgreSQL, SQL, Django ORM, Redis.
Background tasks: Celery, RabbitMQ.
Testing: pytest, unit and integration tests, mocking external APIs.
Tools: Git, Linux, Docker, Docker Compose, GitHub Actions.
Additional: JavaScript and React for interface development.

Experience

Python Backend Developer | B2B SaaS Company

September 2023 - September 2026 | 3 years

A platform with user accounts, access management and external integrations. Worked on backend feature updates, bug fixes and maintenance of existing services.

Main responsibilities

- Developed and updated REST APIs with Django/DRF: request handling, data validation, access permissions, filtering and pagination. Maintained individual FastAPI endpoints.
- Worked with Django ORM models and queries, wrote SQL queries for PostgreSQL and created migrations. Used Redis for data caching.
- Integrated external APIs and maintained Celery background tasks. Handled request errors, configured timeouts and retries.
- Wrote tests, took part in code reviews and task discussions. Checked changes before releases, investigated errors through logs and updated documentation.

Selected improvements

- Optimized catalog queries by removing unnecessary database calls, loading related objects efficiently and using indexes for common queries.
- Added checks for access permissions and external API failures. Extended tests after bug fixes to cover those scenarios in future changes.
- Contributed to build and check configuration with Docker and GitHub Actions. Maintained application startup commands and migration steps.

Experience: task details

Python Backend Developer | B2B SaaS Company
September 2023 - September 2026 | 3 years

APIs and data

- Updated endpoints for user accounts and access management. Validated input, returned clear error responses and checked user permissions when reading or changing data.
- Updated models and database schemas through migrations. Reviewed related-object queries, removed unnecessary database calls and investigated slow API responses.
- Maintained Redis caching with expiration times and cache updates when source data changed. Documented changes to request and response formats.

Integrations and background tasks

- Maintained requests to external services: checked HTTP status codes and response formats, handled timeouts and recorded errors in logs.
- Moved long-running processing to Celery and configured bounded retries for temporary failures. Stored processing status and exposed it through an API endpoint.
- Checked event identifiers when processing webhooks and accounted for repeated delivery. Used transactions and uniqueness constraints for related database changes.

Testing and support

- Wrote business-logic and API tests with pytest. Covered successful requests, invalid input and insufficient permissions; mocked external service responses in tests.
- Checked changes locally and in CI. Reviewed logs and API availability after releases, reproduced reported bugs and added regression checks after fixes.

Education

Kostroma State University
Information Systems and Technologies | Bachelor's degree in progress, third year

Personal project

EidosAcademy. A learning platform built with Django/DRF, PostgreSQL and React. Implemented APIs, authentication and progress tracking; configured tests, CI and deployment.
