Profile

Python Backend Developer with nearly 2 years of commercial development using **Django/DRF and PostgreSQL**. Domain: lead and customer inquiry automation in the jewelry industry. Reduced SQL queries per catalog request **from 74 to 11** and p95 latency **from 920 to 240 ms**; reached **87% line coverage** of backend code. Seeking a remote Python backend development role.

Technical skills

Backend: Python, Django, Django REST Framework, FastAPI, REST API, HTTP, JWT.
Data: PostgreSQL, SQL, Django ORM, Redis.
Background tasks: Celery, RabbitMQ.
Testing: pytest, unit and integration tests, mocking external APIs.
Tools: Git, Linux, Docker, Docker Compose, GitHub Actions.
Additional: JavaScript and React for interface development.

Experience

Python Backend Developer | EFREMOV, Jewelry Company, Yaroslavl

August 2024 - April 2026

Independent development and maintenance of the backend for an internal lead and customer inquiry management system.

Selected results

- Reduced SQL queries per catalog request **from 74 to 11** and p95 latency **from 920 to 240 ms** under the same load and dataset. Removed N+1 queries and tuned indexes using EXPLAIN ANALYZE.
- Reached **87% line coverage** of application backend code with pytest. Added tests for access permissions, duplicate requests and external API failures.
- Cut typical release time **from 40 to 10 minutes** by automating builds and releases with Docker and GitHub Actions, including tests, migrations and health checks.

Responsibilities and technical scope

- **APIs and business logic.** Developed Django/DRF REST APIs for lead records, contact details and inquiry statuses. Added search, filtering, pagination, validation and access checks; maintained individual FastAPI endpoints.
- **Database and caching.** Worked with PostgreSQL, SQL and Django ORM on models, relationships, migrations and queries. Configured Redis caching with expiration times and updates when source data changed.
- **Integrations.** Connected external APIs to exchange inquiry data. Validated HTTP status codes and response formats, handled timeouts and logged errors.
- **Background processing.** Moved long-running work to Celery/RabbitMQ with bounded retries and task-status endpoints. Prevented duplicate webhook processing using event identifiers, transactions and uniqueness constraints.
- **Testing.** Wrote unit and integration tests with pytest and mocked external services. Tested business logic, invalid input and permissions; added regression scenarios after bug fixes.
- **Releases and support.** Clarified requirements, broke changes into tasks and managed code in Git. Checked changes locally and in CI, used Docker and GitHub Actions, applied migrations and verified availability after releases. Documented APIs and investigated errors through logs.

Education

Kostroma State University
Information Systems and Technologies
Bachelor's degree in progress (third year).
