Alexey

Python Backend Developer

Bălți, Moldova | Remote | github.com/Middlewarer

Python backend developer with 3 years of experience in B2B SaaS. Build REST APIs with Django/DRF and FastAPI, optimize PostgreSQL queries, and implement integrations and background processing. Own changes from requirements and design through release and production support.

Experience

Python Backend Developer | B2B SaaS Company

September 2023 - September 2026 | 3 years

A platform with user accounts, access management and external integrations. Responsible for backend features, service integrations and support for released functionality.

- **API performance:** reduced SQL queries per catalog request from **74 to 11** and p95 latency from **920 to 240 ms** under the same load and dataset. Removed N+1 queries and tuned indexes using EXPLAIN ANALYZE.
- **Background processing and integrations:** moved long-running operations to Celery/RabbitMQ with timeouts, bounded retries and task-status endpoints. Prevented duplicate webhook processing using transactions and unique keys.
- **Testing:** reached **87% line coverage** of application backend code with pytest. Added unit and integration tests for access permissions, duplicate requests, timeouts and invalid external API responses.
- **Release automation:** cut typical release time from **40 to 10 minutes**. Automated builds and releases with Docker and GitHub Actions, including tests, migrations and health checks.

Responsibilities. Designed data models, authorization and Pydantic validation; developed APIs with Django/DRF and FastAPI. Worked with Redis, PostgreSQL transactions and migrations, preserving schema and API compatibility during updates. Clarified requirements, estimated tasks, reviewed code, investigated failures through logs and added regression tests.

Technical skills

Backend: Python, Django, Django REST Framework (DRF), FastAPI, asyncio, Pydantic, REST API, HTTP, JWT.

Data and messaging: PostgreSQL, SQL, Django ORM, SQLAlchemy, Redis, Celery, RabbitMQ.

Testing and infrastructure: pytest, unit/integration tests, Git, Linux, Docker, Docker Compose, GitHub Actions, CI/CD.

Additional: JavaScript, React.

Personal project

EidosAcademy. A learning platform built with Django/DRF, PostgreSQL and React. Implemented APIs, authentication and progress tracking; configured tests, CI and deployment.
